Trade, which is proper for *Cornwal*, *Devon*, and other places, where the Materials are at hand. 10. The *SALT-trade* (*ch.* 17.) which goes on with great gain to them that ſet up their Coppers about *Lemmington*, between *Hampſhire* and the Iſle of *Wight*; and in like manner it may proſper all about theſe three Kingdoms, wherever they can get Coppers, Fuel, and Sea-waters. But, 11*ly*. he chiefly prefers *The Fiſhery* (*ch.* 14.) which indeed would in a manner do all, and we wiſh it heartily, but fear it will be at a ſtand, till *S P Q B* do unite their Authority, power, and ſtrength to carry it on. 12. He requires more *NEW INVENTIONS*, and the *ADVANCEMENT of ARTS and SCIENCES* (*ch.* 25, 30.) To theſe fair motions ſome do make report, that ſo many Ingenious Arts, Artifices, Sciences, Inſtruments of Art, Accommodations, Inventions and Diſcoveries are lately ſpread amongſt us, that they provoke Envy: And that in peruſing the Alphabetical Tables of the *Eght Volumes* of theſe Tracts, under the Head *Books*, they have numbered 250 Treatiſes; ſome of them large Volumes, and elaborate; all of them pretending to Uſeful knowledge or buſineſs; moſt of them in the Learned or Forreign Languages. And their main Importance is extracted into as plain *Engliſh*, as I could learn, or as the nature of the ſubject could bear: Certainly ſo plain, that any one of ordinary capacity may ſoon and eaſily thence diſcern, whether the Book be for his occaſions. Many of theſe are exactly rendered into *Engliſh*; ſome of them by Gentlemen, who are themſelves excellent Authors when they pleaſe; and we hope, our Stationers will not be wanting to embrace more of the beſt, when they ſhall be offered for the publick.

So-much for this Author: It is above my ſphere, and beſides my Commiſſion, to paſs any Judgment, either to cenſure or to applaud thoſe Politicals, which relate to Mony, *ch.* 2. or to Forreſts, *ch.* 19. or to the *Engliſh* Colonies *ch.* 31. or whatever affronts any Statutes now in force, *ch.* 6, 16, 28, *&c.* Theſe belong to an higher cognizance, and may be determined by Counſels of State.

The other Book, above pointed at, is entituled ENGLAND'S *IMPROVEMENT REVIVED*, in *Husbandry, and Trade, by Land and Sea*, &c. by *John Smith* Gent. in 4° of which hereafter.

An *Advertiſement* about a New ſize of *Globes* rectified.

There is lately ſet forth a New ſize of Globes *about* 15 *Inches diameter, Celeſtial and Terreſtial. In the former, not only the Right Aſcenſions and Declinations of ſeveral Stars are rectified; but the Conſtellations are ſo faintly and curiouſly repreſented, that the Fixt Stars appear much more conſpicuous, than in any other extent: In the latter there is ſcarce any part of the Earth, wherein a conſiderable alteration hath not been made; ſo that* Aſia *and* America *are in a manner new, and much different from what hath been hitherto drawn upon a Globe: The Eaſtern part of* Aſia *rectified more than* 10 *degrees; and many places in* Europe, Africa *and* America *more than* 5 *degrees: many eminent Towns inſerted, that were wholly omitted in others: The Longitudes and Latitudes of moſt places being now corrected and adjuſted not only by late Diſcoveries, but alſo by Trigonometrical Calculation, and the more accurate Celeſtial Obſervations of modern Authors; the names of whom, together with a further account of the Reaſons of ſuch differences and alterations, ſhall be more at large expreſſed in a Treatiſe deſigned for the Uſe of theſe Globes by* R. Morden, *at the* Atlas *in* Cornhil, *and* William Berry *at the* Globe *between* York-houſe *and the* New-Exchange *in the* Strand, London; *who are the two perſons that ſent in this Advertiſement.*
